Origin Energy has selected Capstone Microturbines to deliver 3MW for the first stage of its new Talinga facility.

The Capstone Microturbines will be delivered in containerised 1MW modules, the largest size offered by Capstone and the first of their kind in Australia. Capstone Microturbines were selected after an extensive evaluation determined that the long maintenance interval and high operating efficiency offered by Capstone delivered the lowest whole of life costs. They will also be the largest single Capstone Mictroturbine installation in Australia.
