

Aquatec Maxcon together with MWH Australia have been selected as the preferred proponent for the Brisbane Caboolture Aquifer Alliance. This project will deliver 10 water treatment plants to augment Southeast Queensland water supplies as part of the government's drought abatement strategy. The project will commence to deliver water to the grid before the end of June, 2007 and will be contributing up to 30ML/d before the end of 2007. This is Aquatec Maxcon's seventh consecutive successful alliance.
